

I urge the rejection of Petition 04-160 that puts restrictions on satellite radio. I just completed a 4000 mile trip from the west coast to the mid-west and back and satellite radio provided me up to date weather information in addition to news and travel information. Non-satellite radio reception was very staticky or non-existence in many of the areas where satellite radio provided me with the information I needed. As I drove from state to state I could remain on the same channel the entire distance and time. I didn't have to search the dials or AM or FM to try to find a station. Only satellite radio can provide the information and service that one requires while traveling or visiting an area.
